

PRODUCT CATALOGUE

Your whole company, one platform.

A complete, connected ERP for Human Resources, Sales & Finance, CRM and Document Management — built for growing businesses, engineered to global standards, and proven first in Nigeria.

HR & Performance

Sales & Finance

CRM

Document Management

No-Code Workflows

One system. Every department. Built to grow with you.

Most growing companies run on a patchwork of spreadsheets and disconnected apps — one tool for payroll conversations, another for invoices, another for the sales pipeline, none of them talking to each other. Hubtoll replaces that patchwork with a single, connected platform: one login, one source of truth, and a workflow engine that routes every request to exactly the right person, in every department.

This catalogue is your complete overview of what's live today, how it fits together, and what it costs — written for the ERP-literate buyer who wants the real technical detail, and for the founder or operations lead evaluating their very first business system.

Live product suites

30+

Modules & features shipped

1

Login for every module

100%

Multi-tenant data isolation

Priced to actually fit

Per employee, per module — pay only for the seats that use each product, not a flat enterprise fee.

Built to bend to you

Forge lets your team design its own forms and approval processes — no developer required, ever.

Global-ready, locally deep

Multi-currency and multi-company from day one, with Nigeria-first tax handling (VAT & WHT) built in — not bolted on.

What's inside

01	Why Hubtoll	The problem we solve, and the three ideas behind the platform	04
02	Platform Foundations	The engine underneath every module — workflows, roles, isolation, audit	05
03	Human Resources Suite	Ten connected modules covering the entire employee lifecycle	06
04	Sales & Finance	A true double-entry ledger, invoicing, tax and reporting	08
05	CRM	Pipeline, communications and automation that closes the loop to invoicing	09
06	Document Management (EDMS)	Secure, versioned, audited document storage	10
07	Forge — No-Code Builder	Design your own forms and workflows, without a developer	11
08	On the Roadmap	What's coming next — Payroll and Procurement	12
09	Security, Compliance & Trust	How your data is protected, isolated and governed	13
10	Built for Global Business	Multi-currency, multi-company, and depth where it matters most	14
11	Who Hubtoll Is Built For	The teams and businesses that get the most from day one	15
12	Getting Started	How implementation actually works, week by week	16

Software should adapt to your business — not the other way around

Every incumbent ERP asks you to reshape how you work around its schema. We built Hubtoll around a different premise: a growing company's processes are its own, and the system running it should bend to fit them, not the reverse. Three ideas make that possible.

1 Completeness, priced to fit

A firm buying HR, finance, CRM and document management separately pays four vendors, keeps four logins, and reconciles four exports by hand. Hubtoll is one vendor, one login, and one connected data model — priced per employee, per module, so you pay only for the seats that actually use each product.

2 Adaptability as a built-in feature

Forge, our no-code form and workflow builder, is the same engine every module runs on — exposed to you. Need a field, a process, or an approval chain that doesn't exist out of the box? Build it yourself, in minutes, with no developer and no support ticket.

3 One workflow engine, every department

Leave requests, invoices, budget approvals, exit clearances, custom Forge processes — all route through the same configurable, multi-stage approval engine. Configure who approves what, once, and it works identically everywhere. Nothing slips through because nothing is a one-off.

See it running on your own data

Book a live walkthrough with the team — no slide deck, the real product.

hubtoll.com/pricing

The engine underneath every module

These six capabilities aren't a module — they're the foundation every module in Hubtoll is built on. Learn them once, and you understand how the entire platform behaves.

Multi-stage approval workflows

Configure who approves what, in what order — built into leave, budgets, appraisals, exits, invoices, Forge processes and more.

Role-based access control

Fine-grained permissions and roles keep sensitive data in the right hands, module by module, action by action.

Multi-tenant isolation

Every organisation's data is strictly isolated at the architecture level — secure by design, not by configuration.

Immutable audit trails

Tamper-evident logs of key actions across the platform, for accountability and compliance review.

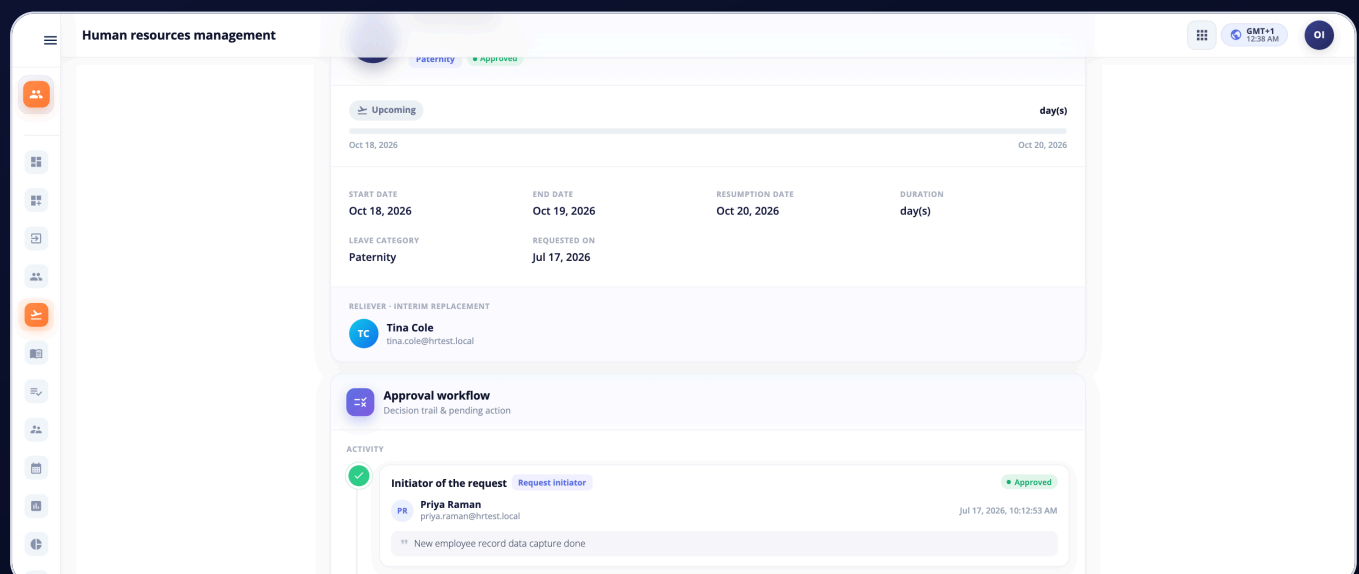

Advanced filtering & search

Build precise, shareable views with nested AND/OR conditions across any list in the platform.

NDPA-aligned data protection

Privacy practice and a clear data-retention policy aligned with the Nigeria Data Protection Act, 2023.

The full employee lifecycle, connected

From the day someone applies to the day they leave, every HR event lives in one place — records, leave, hiring, onboarding, time, budgets, performance, learning and project work, all routed through the same approval engine.

Employee Records

One source of truth for your people — personal details, job records, departments and offices, always approval-gated and open to employee self-service.

Leave Management

Employees request in a few clicks; approvals route themselves. Custom categories, carryover policy and a configurable weekend fit how your team works.

Recruitment

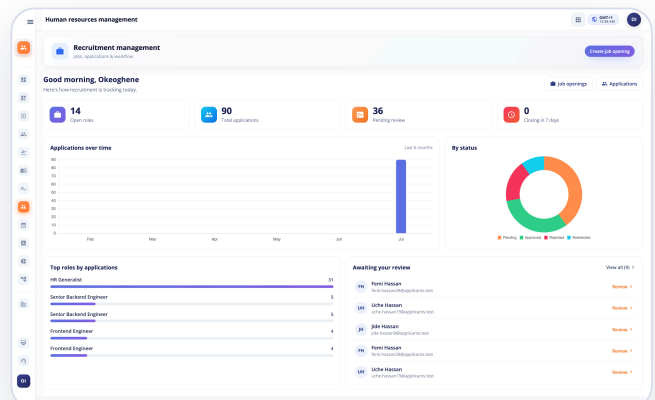

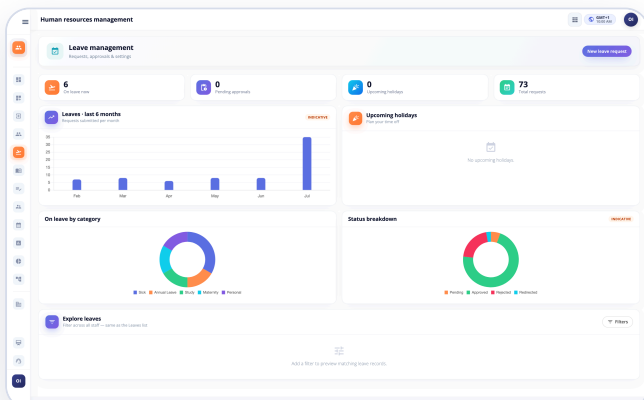

Publish openings on a public careers page, collect applications with résumés, and screen candidates through your own approval stages.

Onboarding

Reusable kits turn induction into a repeatable checklist — new hires acknowledge each item themselves, live, while you watch progress.

Timesheet & Clocking

Log time against real projects, submit for approval, and give managers a queue of exactly what's waiting on them.

Budgets, exits, performance, growth

Budget Management

Departmental budgets with line items, expense tracking against allocations, and overspend warnings before they become surprises.

Exit Management

Structured offboarding with reasons, feedback and tool clearance — every exit reviewed through your approval chain, with live trend stats.

Performance Management

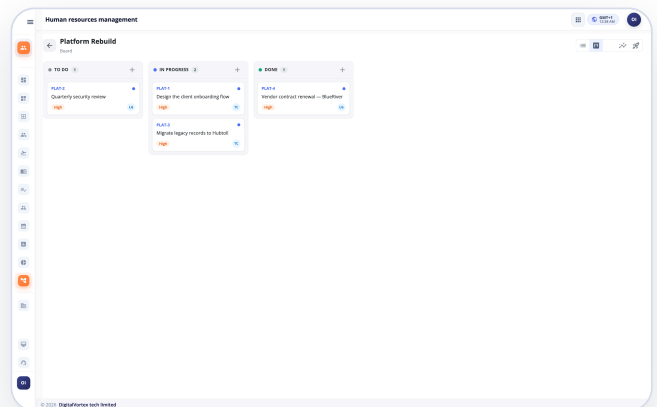

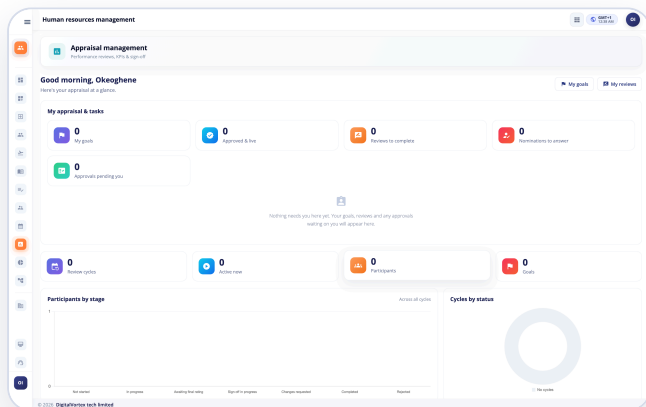

Cascading, weighted goals that roll up from company to person. True 360° feedback — self, manager and peers, sealed anonymously — then a workflow sign-off on every rating.

Learning & Development

Author courses, lessons and quizzes in-house; enrol your people; track completion and certificates as your team grows.

Project Management

Plan work like a product team, for every profession. Kanban boards and sprints, owners and collaborators per task, a backlog with releases and sign-off — and time logged straight back to timesheets.

Invoicing that lands on a real ledger

Not a spreadsheet with an invoice template — a true double-entry accounting system underneath, with Nigeria-first tax handling built in from the start.

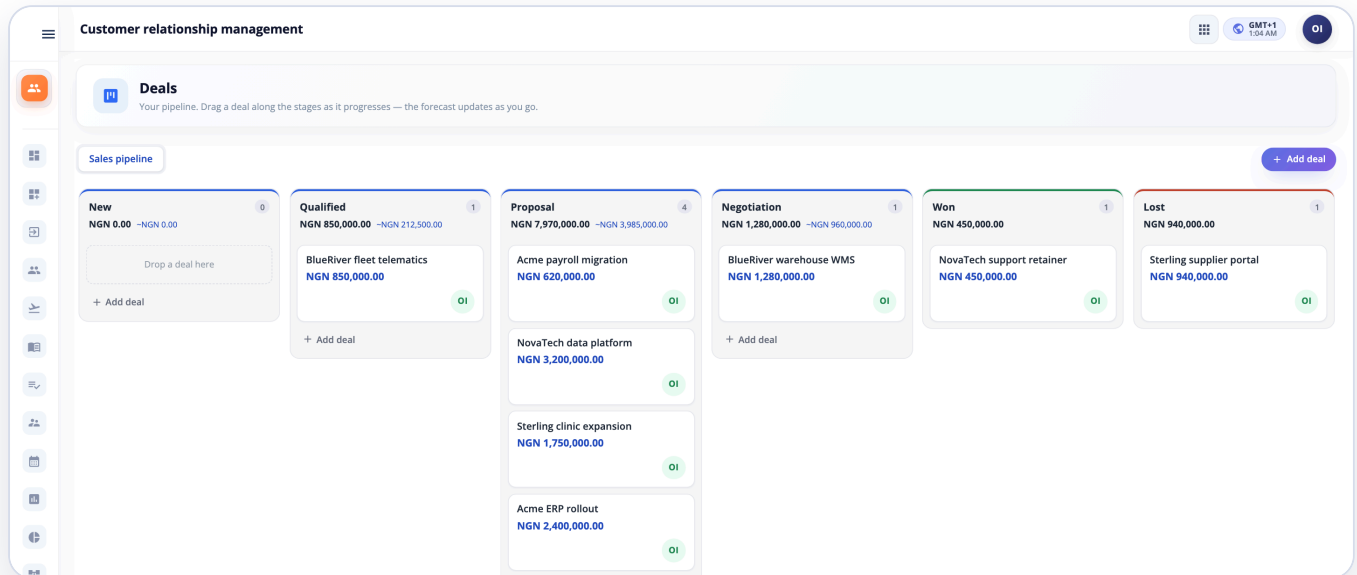

- ✓ **True double-entry ledger** — every transaction posts balanced journal entries to a seeded chart of accounts. Posted journals are immutable; corrections are reversals, never silent edits.
- ✓ **Sales & receivables** — quotes, sales orders, invoices, payments, credit notes and cash sales in one connected funnel, with AR aging and customer statements.
- ✓ **Purchases & payables** — vendors, bills, payments made and vendor credits, mirroring the sales side, with AP aging and vendor statements.
- ✓ **VAT & withholding tax built in** — jurisdiction-aware tax profiles (Nigeria-first), output and input VAT, withholding at payment, and a ready-to-file VAT return.
- ✓ **Maker-checker approvals** — invoices and journals route through the same multi-stage approval engine as HR; documents post to the ledger only on final approval.
- ✓ **Reports that reconcile** — trial balance, general ledger, aging and tax reports straight from the ledger, so they always agree.

From first hello to money in the bank

A pipeline, a shared inbox, and the automations to keep a deal moving — with the wedge no standalone CRM has: a won deal becomes an invoice with one click, because Sales & Finance already lives right next door.

Deals & Pipeline

Drag-and-drop board with stage totals, weighted forecasts and won/lost reasons.

Contacts & Companies

A 360° profile — people, companies, deals and every conversation, with custom fields.

Communications

Connected Gmail & Outlook mailboxes, threaded, with read receipts and unread counts.

Email Templates

Rich-text templates with merge fields and attachments, personalised per contact.

Sequences

Multi-step cadences that send themselves — day-offset steps, auto-stop on reply.

Automations

When-this-then-that rules: tasks, templates, sequence enrolment or owner changes on record change.

Leads & Web-to-Lead

A public web form feeds leads straight into your pipeline — qualify, convert, or recycle.

Reports

Pipeline value, win rates, activity volume and conversion — export-ready.

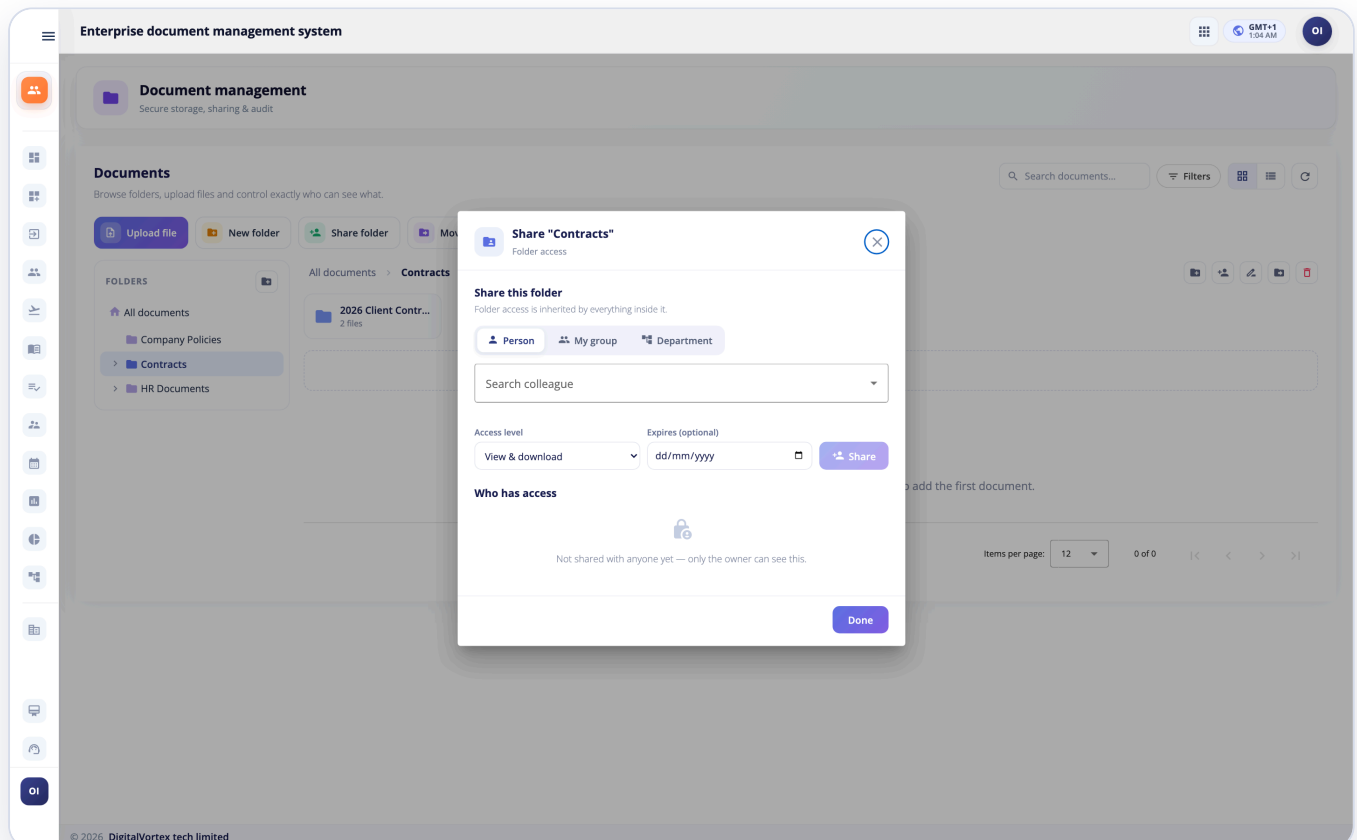

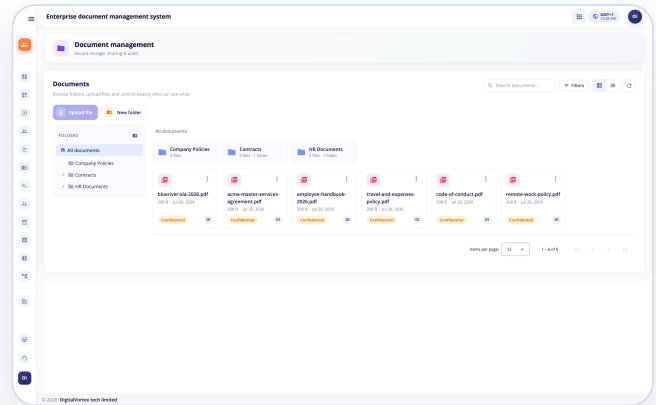

The quote-to-cash wedge

Win a deal → Hubtoll drafts the invoice → issue, get paid, it's on your books the same second. One system, not a handoff.

Every document, locked down and findable

Enterprise-grade document control — organise, version, and govern access to every file your company holds, with a full accounting of who saw what.

- ✓ **Document explorer** — a familiar folder hierarchy with fast, powerful navigation.
- ✓ **Versioning & history** — every change captured; roll back to any previous version with confidence.
- ✓ **Granular access control** — access groups, department principals and per-document grants, with expiring access when you need it.
- ✓ **Immutable audit trail** — an append-only record of who did what, when — including denied access attempts.
- ✓ **Flexible storage** — multiple storage backends with built-in migration tooling and per-user quotas.
- ✓ **Retention & recovery** — soft-delete with a recovery window before permanent, irreversible deletion.

Build your own — no code, no waiting

Most ERPs make you request a feature and wait. With Forge, you build it — a form, a field, a fully-routed approval process — yourself, in minutes. It's the same engine every Hubtoll module runs on, handed to you.

1

Design the form

Drag sections and fields onto the canvas — text, dates, dropdowns, files and more — with a live preview as you build.

2

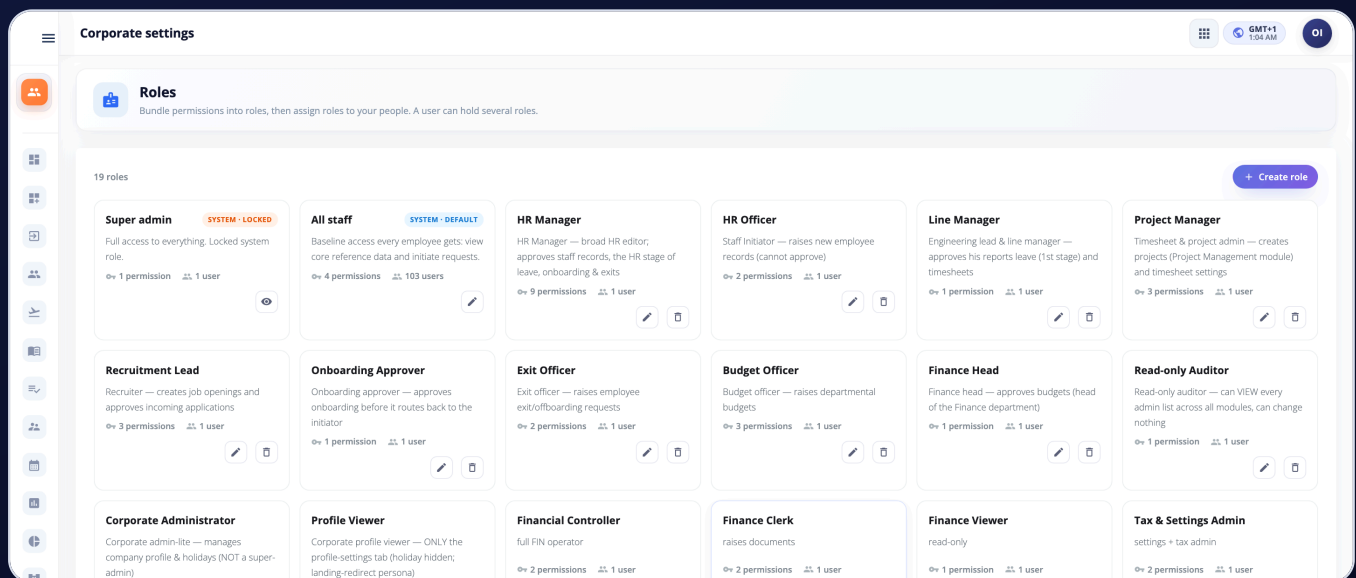

Attach a workflow

Route every submission through your own multi-stage approval chain — the same engine that powers the rest of Hubtoll.

3

Publish & track

Share the form, collect submissions, and track every one to completion with a full action history.

Data-bound dropdowns

Populate a field from your People, Departments, or any external API — options stay accurate with zero manual upkeep.

Custom fields on built-in modules

Add your own fields to Leave, Employee Records, Budget, Onboarding, Recruitment and Appraisal — searchable, and shown on every view.

What's coming next

Hubtoll ships fast, in public. These two products are actively on the roadmap — talk to us if either is what's holding your team back today, and we'll tell you honestly where they stand.

Payroll

Accurate salary runs, deductions and disbursements — connected to the same employee records and approval engine as the rest of the HR suite.

Roadmapped

Procurement

Requisition to vendor selection to purchasing — completing the loop with Sales & Finance's payables and vendor management.

Roadmapped

We deliberately stay out of one category: **compliance-critical payroll tax filing** varies enormously by jurisdiction, and we'd rather integrate cleanly with specialists there than half-build it ourselves. Ask us about our approach if this matters to your evaluation.

When is Payroll shipping?

We don't commit hard dates before a feature is real. Tell us it matters to you and we'll give you the honest current target.

Can I get early access?

Yes — tell us your specific need and we'll loop you in as each roadmap item is built and tested.

Built defensible from the ground up

Security isn't a page we wrote after launch — it's structural. Here's what actually protects your data.

- ✓ **Strict multi-tenant isolation.** Every corporate's data is architecturally separated — no query can cross tenant boundaries by construction.
- ✓ **Cookie-session authentication.** Short-lived access tokens held only in memory; refresh sessions live in secure, HttpOnly cookies — never in browser storage.
- ✓ **Role-based access control everywhere.** Every module, every action, gated by fine-grained permissions — not a single all-or-nothing admin switch.
- ✓ **Immutable, append-only audit trails.** Key actions — including denied access attempts — are logged and cannot be altered after the fact.
- ✓ **Security event monitoring.** Failed logins, rate-limit blocks, permission denials and suspicious requests are recorded and mapped against the OWASP Top 10.
- ✓ **Encrypted document storage.** Files are encrypted at rest, with per-user quotas and a soft-delete recovery window before permanent deletion.
- ✓ **NDPA-aligned data protection.** Practices and retention policy aligned with the Nigeria Data Protection Act, 2023, with cross-border safeguards for any data transfer.
- ✓ **Maker-checker on every financial post.** Sales & Finance documents post to the ledger only on final approval — never on a single click.

Need a formal security review?

We're happy to walk your security or procurement team through the architecture directly.

[Talk to us](#)

We hold ourselves to the practices above and describe them plainly rather than claiming certifications we don't yet hold. If a specific framework (SOC 2, ISO 27001) is part of your evaluation, ask us directly where we stand on the path toward it.

Proven in Nigeria. Built for the world.

We didn't design for one market and bolt on the rest. Hubtoll's foundations — currency, tax, and multi-company structure — are global by default, with the kind of local depth most international platforms never bother to build.

Multi-currency by default

Bill customers in the currency they expect. Exchange rates, foreign-currency invoicing and period-end revaluation are core to the ledger, not an add-on module.

Run every company from one login

Own more than one business? Switch between them like switching inboxes — one login, completely separate books, zero mix-ups.

Nigeria-first tax, done properly

Output and input VAT, withholding tax at the point of payment, and a ready-to-file VAT return — the depth a Nigerian finance team actually needs.

English-first, anglophone-ready

Built for English-speaking businesses — Nigeria and wider Africa first, expanding to the US, UK, Canada, Australia and Ireland as the natural next markets.

The screenshot displays the Hubtoll Corporate dashboard for a user named Okeoghene Iyola. The interface is clean and modern, with a dark blue header and a light blue sidebar. The main content area is divided into several sections:

- Header:** Greeting "Good morning, Okeoghene Iyola" and date "Tuesday, July 21, 2026". A Hubtoll logo and "WORKSPACE Digitalvortex tech Agriculture and Farming" are in the top right.
- MY STAFF INFORMATION:** A section with a placeholder for staff information.
- Staff on leave:** A card showing Nora Bello (nora.bello@hrttest.local) is on leave from Jul 20 to Jul 23, 3 days left, relieved by Noah Kim.
- Birthdays this month:** A list of birthdays for July, including Sam Yusuf (Jul 2nd), Helena Hart (Jul 2nd), Nkem Okafor (Jul 6th), Michael Tijani (Jul 10th), and Grace Williams (Jul 20th).
- Pending approvals:** A list of pending job application management approvals, including Jide Hassan, Uche Hassan, Femi Hassan, and Uche Hassan.
- Holidays:** A calendar for July 2026, showing the 21st as a holiday.

The footer shows "© 2026 DigitalVortex tech limited".

Built for teams outgrowing spreadsheets

Hubtoll fits any English-speaking business ready to run on a real system — it's especially built for a few situations we see over and over.

Growing professional-services firms

Agencies, consultancies, accounting and law practices, clinics — 10 to 50 staff, desk-based, and outgrowing the spreadsheet-and-WhatsApp era all at once.

Multi-business owners

Run more than one company? Switch between them from a single login, with completely separate books and zero risk of mixing them up.

Operations & HR leads standing up their first system

Replace employee records, leave and approvals living in spreadsheets and email threads with a system that runs itself.

Finance teams that need real accounting

A true double-entry ledger, VAT and WHT handling, and reports that always reconcile — not a glorified invoice generator.

Not a fit today: businesses that need certified payroll-tax filing in a jurisdiction we don't yet cover, or that need only a single, deeply specialised tool rather than a connected platform. We'll tell you honestly if that's you.

10–50

Staff — the sweet spot where spreadsheets stop working and a real system pays for itself.

Days

Typical time to first live login — not the multi-month rollout of a legacy ERP.

1

Vendor, one relationship, across every department you licence.

Live in days, not months

Onboarding a new ERP shouldn't take a quarter. Here's how a typical Hubtoll rollout actually goes.

1 A guided walkthrough on your data

We show you Hubtoll configured for a business like yours — not a generic demo — and scope exactly which modules and seats you need.

2 Migration, done with you

Employee records, leave balances and your chart of accounts move in — we help with the migration ourselves, so day one isn't a blank system.

3 Workflows configured to match how you already work

Your approval chains — who signs off leave, who approves invoices — get built into the engine before your team's first login, or built by your own team using Forge.

4 Your team goes live, with support that doesn't disappear

Ongoing support from a team that still knows your setup by name — not a ticket queue.

Ready to see it on your own numbers?

Book a walkthrough and we'll scope your rollout in the same call.

hubtoll.com

Run your whole company in one place.

One platform. Every department. Priced to actually fit your team.
